

Pravinkanna Parthiban

Senior Backend Engineer

pravinkannap@gmail.com | +919843638308 | github.com/pravinkanna | linkedin.com/in/pravinkanna | Bangalore, India

SUMMARY

Backend Engineer with 5+ years of experience architecting distributed systems and microservices that serve millions of users and process billions of records. Specializes in improving reliability and security while reducing operational costs by simplifying architecture. Proficient across Go, Node.js, GCP, AWS, Docker, Kubernetes, PostgreSQL, and MongoDB.

SKILLS

Languages: Go (Golang), TypeScript/JavaScript (Node.js), Python, SQL

Databases & Messaging: PostgreSQL, MongoDB, Elasticsearch, Redis, Firestore, Kafka, RabbitMQ

Cloud & DevOps: GCP, AWS, Docker, Kubernetes, GitHub Actions (CI/CD), Prometheus, Grafana

WORK EXPERIENCE

Zobaze Technologies | Backend Developer

Hyderabad, India | Jun 2025 - Aug 2026

- Sole owner of the backend and GCP cloud infrastructure for a product serving 2M users, reporting directly to the CEO and setting technical direction across the stack.
- Improved stock accuracy from 85% to 99% across 1.5M businesses by redesigning the offline inventory system as an append-only transaction ledger, eliminating sync conflicts and retiring the reconciliation service.
- Rebuilt subscription activation as a server-authoritative flow driven by payment-provider webhooks in Node.js, resolving activation failures and duplicate-subscription conflicts that affected 15% of paid accounts.
- Built a Firestore-to-BigQuery archival pipeline in Golang for 700M+ sales and activity records, tiering data older than 3 months and reducing Firestore costs by ~20%.
- Developed an in-house push-notification and engagement platform in Golang processing 100K events/day across 1.5M businesses, replacing NudgeNow and removing recurring vendor licensing costs.
- Led a GCP security overhaul across 13 projects: eliminated all long-lived service-account keys via keyless auth, restricted every API key to app-only usage, and shut down unauthenticated legacy services.
- Built a Claude Code plugin that persists tasks, meetings, decisions, research, and blockers as a searchable knowledge base — now the default daily workflow for the entire 12-person company.

Vumonic Datalabs | Software Engineer

Bengaluru, India | Jun 2021 - May 2025

- Built a real-time email ingestion system in Golang maintaining 1M concurrent IMAP IDLE connections (~30K per node), reducing new-mail fetch latency from 8 hours to under 1 minute.
- Productized the company's email dataset as Inboox.ai, a live SaaS for email marketers: built REST APIs, ingestion pipelines, search over 1.5M+ emails from 10K+ brands, and subscription management using Golang and Node.js.
- Rewrote Node.js services in Golang, improving throughput by 40% through concurrent processing and eliminating a class of runtime type errors with typed contracts.
- Led a zero-downtime migration of 80 TB of storage, 30 Kubernetes services, and 5 databases from AWS to GCP through phased cutovers.
- Migrated managed MongoDB and Elasticsearch (8B+ records, 3M users) from Atlas and Elastic Cloud to self-hosted deployments with automated backups, cutting database costs by ~70%.
- Automated Docker builds and Kubernetes deployments with GitHub Actions across 30+ microservices, replacing fully manual releases with push-to-deploy pipelines.

EDUCATION

B.Sc. Computer Science

Bishop Heber College

Trichy, India | Jun 2018 - May 2021
